Like Negative pressure wound therapy

Dermal matrix and Allografts

Stemcell and amniotics products

PRP and PRFM wound therapies

HBOT and its uses

Padma pada wound center is now getting ready for HBOT

Hyperbaric oxygen therapy (HBOT) is a type of treatment used to speed up healing of carbon monoxide poisoning, gangrene, wounds that won't heal, and infections in which tissues are starved for oxygen. For this therapy, One has to enter a special chamber to breathe in pure oxygen in air pressure levels 1.5 to 3 times higher than average. The goal is to fill the blood with enough oxygen to repair tissues and restore normal body function.

Wound Care networking and wound app

An ambitious project of padmapada to make use of tech and artificial intelligence into wound care. An online app connecting doctors, patients and wound nurses.

Care delivered through a online platform, still at a research phase.

Why choose Padmapada??

- Highly Professional Team with years of experience
- Strategic protocols for accelerated growth
- Most Up-To-Date Techniques & Equipments
- Personalised Care to each and every wound
- End to end solutions in wound care under a single roof
- Good R & D Team for innovation

Community level diabetic and wound healing program

Tip

Penetrated into the community with a agenda starting if any wound is not showing signs of healing in 2 weeks we need to change the method of wound care

Diabetic foot education program

Tip

We started train the foot trainer program in which we conducted several knowledge sharing activities among nurses and wound care staff

Join hands with Padmapada to create a quality and affordable wound care
